

**BUBBLE
ALLSTARS**

Electric Pump

Read precautions thoroughly before use.

1. The running time of the electric pump should not exceed 20 minutes. The pump must then be switched off for approx. 10 minutes.
2. Switch off the device between blowing the bubbles for a few minutes if necessary.
3. Children are strictly forbidden to operate the pump
4. The inflation and air discharge nozzles must be free from obstructing objects or dirt during operation
5. The device must be stored in a dry place
6. The product is not intended for use by persons (including children) with reduced physical and mental abilities or lack of experience and knowledge. Children should be supervised to prevent them from playing with the product. Keep the appliance out of the reach of children.

Bubbles

The Bubbles are designed for the intended use only. No warranty or liability is assumed for a misuse.

Caution: Do not overload the unit!

Instructions for use

1. Setup

In order not to damage the bubble, the setup may only be carried out on gentle substrates (see point 4, Game Field and Background Texture). The bubble may only be inflated with the enclosed electric pump. Make sure that the bubble is completely inflated, but not overloaded, as damage to the bubble may occur. Make sure the straps are tight and not loose. Slipping of the belts must be prevented.

2. Use

Bubbles are used at your own risk.

The Bubbles are designed exclusively for the sport bubble soccer. A bubble is suitable for a maximum of one person. Make sure that both straps are tight and that the handles are held firmly with both hands at all times while you are in the bubble. The head must never protrude from the bubble, since otherwise serious injuries can occur (see point 5. Physical requirements). The bubble may only be used with suitable sports gear and firm footwear. Jewelry, watches and other items worn on the body which could damage the bubble must be removed for safety reasons.

3. Performance

As with any type of sport, injuries can also occur in bubble soccer. In order to minimize the risk of injury, a detailed warm-up training must be carried out before using the bubbles. Caution: Even if the Bubbles provide a certain protection when falling down, a collision nevertheless causes very great forces, which can lead to injuries. Basically it is not allowed to bounce players from behind or from the side with the bubble, as they can not build the necessary body tension for the collision.

4. Playing field, ground conditions and weather

Bubble soccer is to be played exclusively on green areas (soft grass). Before the start of the game, the ground must be inspected for sharp objects which could damage the bubbles. In addition, care must be taken that the playing field is well defined so that the players can not roll away in the bubbles. In case of bad weather conditions, there is an increased risk of injury, so we explicitly point out that in bad weather conditions (such as rain, storm, hail, snow or ice) should not be played.

5. Physical conditions

Each player must be at least 18 years old, 160 cm tall and in good physical condition. The Bubbles are suitable for players up to 90 kg body weight and 190 cm body size.

6. Health requirements

It is expressly forbidden that people participate who are suffering from dizziness, circulatory problems, vision disturbances, epilepsy, cardiac or respiratory diseases or the like, as well as pregnant persons or persons who have recently taken an operation or are under the influence of alcohol or drugs. Each player must be in good physical and mental condition and should exercise regularly to meet the physical requirements.

7. Wear & Tear

Depending on the intensity of the use, different wear phenomena occur. Should a bubble leak, you can repair the leak with the enclosed soft PVC replacement and a special soft PVC adhesive. Be sure to use the correct adhesive (no normal PVC or hard PVC adhesive)

8. Storage

We would like to draw your attention to the fact that it can lead to an increased wear on the bubbles if improperly stored. Take care to store the bubbles carefully and dry and without exposing them to direct sunlight. Furthermore, no bubbles should be stored on top of each other or other objects on the bubbles.

9. Proper Care & Cleaning

For best maintenance and performance we recommend cleaning the inside of the Bubbles after each use to remove any wetness from perspiration and prevent mildew build up over time. Perspiration does not typically appear from the average player. We recommend cleaning the Bubbles with non-scented environmentally safe sprays and rags while they are inflated. This will make it much easier to wipe them off and they will dry more quickly.

Warnings

1. The exaggerated and misused use of the bubbles can lead to physical injuries.
2. Before each use of the Bubbles, check the gaming device to detect and eliminate any signs of wear and the resulting defects.
3. The material of the Bubbles is flammable and must therefore be kept away from fire, embers or the like.
4. Due to the reduced access to fresh air in the bubble and the exertion of the sport, care should be taken to take a lot of breaks and climb out of the bubble again and again to get fresh air.
